RE: Upper Deschutes Resource Management Draft

As a concerned citizen and recreationist I would like to be on record as supportive of motorized recreation on BLM lands in Central Oregon.

The preferred alternative BLM is proposing does not adequately reflect how an interim policy will be implemented. This interim policy greatly affects our sport and the users as there are no assurances BLM will ever have the resources to put together a designated trail system in the areas proposed.

The aggressive vegetation management in Alt. 7 of the Juniper woodlands will negatively impact a proposed trail system.

We do not support the closure of the Badlands and feel that providing no motorized opportunities at Prineville Reservoir and the Lapine area is a mistake. There is use occurring in those areas currently, where will that use go? Especially for the Lapine and Prineville residents.

Our use is increasing approximately 20% annually with sales of OHV equipment listed at \$18 billion annually – the increasing use is not reflected in the severe limitations to OHV use on BLM land.

Please adopt a more flexible road trail density to allow for the best use of the land and for a designated trail system that will succeed. By micromanaging your areas and attempting to put trails out for several different uses in the same areas we feel the management will fail and ultimately our use will suffer further restrictions.

RE: Upper Deschutes Resource Management Draft

As a concerned citizen and recreationist I would like to be on record as supportive of motorized recreation on BLM lands in Central Oregon.

The preferred alternative BLM is proposing does not adequately reflect how an interim policy will be implemented. This interim policy greatly affects our sport and the users as there are no assurances BLM will ever have the resources to put together a designated trail system in the areas proposed.

The aggressive vegetation management in Alt. 7 of the Juniper woodlands will negatively impact a proposed trail system.

We do not support the closure of the Badlands and feel that providing no motorized opportunities at Prineville Reservoir and the Lapine area is a mistake. There is use occurring in those areas currently, where will that use go? Especially for the Lapine and Prineville residents.

Our use is increasing approximately 20% annually with sales of OHV equipment listed at \$18 billion annually – the increasing use is not reflected in the severe limitations to OHV use on BLM land.

Please adopt a more flexible road trail density to allow for the best use of the land and for a designated trail system that will succeed. By micromanaging your areas and attempting to put trails out for several different uses in the same areas we feel the management will fail and ultimately our use will suffer further restrictions.

RE: Upper Deschutes Resource Management Draft

As a concerned citizen and recreationist I would like to be on record as supportive of motorized recreation on BLM lands in Central Oregon.

The preferred alternative BLM is proposing does not adequately reflect how an interim policy will be implemented. This interim policy greatly affects our sport and the users as there are no assurances BLM will ever have the resources to put together a designated trail system in the areas proposed.

The aggressive vegetation management in Alt. 7 of the Juniper woodlands will negatively impact a proposed trail system.

We do not support the closure of the Badlands and feel that providing no motorized opportunities at Prineville Reservoir and the Lapine area is a mistake. There is use occurring in those areas currently, where will that use go? Especially for the Lapine and Prineville residents.

Our use is increasing approximately 20% annually with sales of OHV equipment listed at \$18 billion annually – the increasing use is not reflected in the severe limitations to OHV use on BLM land.

Please adopt a more flexible road trail density to allow for the best use of the land and for a designated trail system that will succeed. By micromanaging your areas and attempting to put trails out for several different uses in the same areas we feel the management will fail and ultimately our use will suffer further restrictions.

RE: Upper Deschutes Resource Management Draft.
Public Comment Process

As a concerned Central Oregon resident I would like to be on record as supportive of 'Current Range Vegetation Management'. The preferred alternative B.L.M. is proposing utilizes a newly formulated technique called 'Historic Range'. I support 'Current Range' over 'Historic Range' for several reasons.

1. Current range is the B.L.M.'s present method of vegetation management.
 - a. It is the best approach because of it's built in flexibility.
 - b. Current range isn't restricted like historic range to a concept of trying to recreate the uncertainties of the past.
 - c. The concept of recreating vegetation conditions that existed 150 years ago and before is impossible and isn't very beneficial to the community at large.
 - d. Current range is the most compatible and consistent with other current land-use activities like agriculture, multiple use and recreation.
 - e. Current range works the best with our current and future vegetative conditions.
 - f. Current range has the best chance of creating a healthy and diversified ecosystem that prioritizes our current needs and vegetative concerns.
 - g. The B. L. M.. is managing public lands within a federally designated reclamation project area. The land within this reclamation area is mostly privately owned. This project area is meant for human development and occupancy. That is another key reason I support current range, it accommodates people and their actions the best. It works better under change, the types of changes that will occur now and in the future.
2. Historic range vegetation management is a new and uncertain concept I do not support.
 - a. I do not support the B.L.M.'s efforts to re-create the vegetation uncertainties of the past.
 - b. How do I know if historic range is the best choice when it's never been used before?
 - c. Historic range will be more expensive to implement and more law enforcement will be necessary.
 - d. Those greater expenses cannot be justified by results that are unclear and uncertain.
 - e. Historic range reduces public access, has built-in conflicts with multiple use, and de-emphasizes agricultural use.

Please amend the preferred alternative to support:

'Current Range Vegetation Management'.
